

Work Sample - Healthcare AI Governance Benchmarking

Project: Benchmarking AI & Research Governance in Healthcare

Problem:

A global health technology company needed to design a governance framework for AI in patient data management, balancing ethical use, consent, and regulatory compliance.

Action:

Conducted targeted benchmarking of AI governance practices across top healthcare and life sciences organizations. Analyzed integration of IRB processes, consent management, synthetic data handling, and AI ethics oversight. Synthesized cross-industry best practices.

Result:

Delivered a structured governance model with clear ownership across clinical, legal, and data teams, reducing compliance risk and enhancing trust with patients and regulators.
